Profile

Full-stack developer with hands-on experience delivering production web applications for real clients, across self-hosted and cloud environments. Experienced in end-to-end development from stakeholder requirements to deployed systems, with a strong foundation in DevOps, and secure system design.

Experience

Lead Developer | FrankView (Client Project)

Dec 2025 – Present

- Led end-to-end development of a family-law mediation platform supporting multi-party negotiation workflows.
- Designed relational data models managing assets, liabilities, capital gains, and role-based access control.
- Built full-stack features using Next.js, TypeScript, and Supabase with secure authentication and server-side logic.
- Integrated AI-powered OCR using Gemini to automate document parsing, streamlining data entry workflows
- Implemented offer exchange and version-tracking systems enabling structured participant negotiations.

Lead Developer & Project Manager (WIL) | SOPREMA

Aug 2025 – Nov 2025

- Managed Agile sprint planning, task allocation, and project delivery timelines.
- Liaised directly with stakeholders to gather requirements and communicate progress.
- Implemented CI/CD pipelines using GitHub Actions and containerised deployments with Docker.
- Developed authentication workflows, database schemas, and core system specification features.
- Established automated testing foundations using Jest across core authentication and scheduling workflows.

Senior Student Belonging Activator | Macquarie University

May 2025 – Present

- Assisted recruitment through candidate screening and assessment coordination.
- Streamlined internal booking systems improving operational efficiency.
- Led operational teams during large campus activations.
- Coordinated branded social media campaigns increasing engagement by 50%.

Notable Projects

Homelab Infrastructure & Self-Hosting Environment

- Built and maintained a virtualised Proxmox homelab deploying containerised applications using Docker and AWS (EC2, Route53) to simulate production hosting environments.
- Maintained live production deployments serving publicly accessible applications through self-hosted and cloud-integrated infrastructure.
- Configured secure remote access and public exposure through Cloudflare Tunnels and Tailscale networking.
- Explored infrastructure provisioning, service monitoring, and local AI workloads.

Portfolio Website – Full-Stack Deployment & Infrastructure

- Developed a responsive portfolio using Next.js and TypeScript designed with Figma.
- Self-hosted the application within a Proxmox homelab environment.
- Configured secure public access via Cloudflare networking under a custom domain.
- Implemented a cloud-based disaster recovery strategy using an AWS EC2 standby environment with automated backups to Amazon S3.

LikeThat — Music Discovery Web Application

- Developed a full-stack music discovery platform using React, Next.js, TypeScript, and Supabase.
- Integrated third-party music APIs and implemented authentication, database interactions, and responsive UI components.
- Designed scalable frontend architecture prioritising maintainability and user experience.

Skills

Frontend: React, Next.js, Tailwind CSS, Shadcn, Zustand

Backend: Node.js, Express, Supabase, MongoDB

DevOps & Tools: Git, GitHub Actions, Docker, Linux, Proxmox, Tailscale, Cloudflare, AWS

Languages: C, Java, JavaScript, TypeScript, Python, HTML, CSS

Design & Prototyping: Figma, Canva

Soft Skills: Project Management, Problem Solving, Customer Service, Communication

Certification: AWS Certified Developer – Associate (In Progress)

Education

Bachelor of Cyber Security

Feb 2023 – Nov 2025

Macquarie University

Diploma in ICT

2018 – 2020

Don Bosco Technical Institute Makati, Philippines
